

# Human Research in rehabilitation (Hrr)

*The international Journal for education / rehabilitation and psychosocial research*

## Notes to Contributors

Thank you for your interest in submitting to **Hrr**. We welcome manuscripts covering the full range of the journal's remit from any locality.

Please take to read the notes below so that the submission process will be smooth and peedy. All submissions to **Hrr** should be prepared according to the Notes to Contributors and then submitted online. This applies to all manuscript types.

Guidance for particular types of submissions (articles, debates, etc.) is available from <https://human.ba/submission/how-to-publish/> 'Instructions and Forms'

Manuscripts will be considered for **Hrr** only if they have not already been published, and are not currently under consideration for publication, elsewhere. Manuscripts should not contain substantial elements of material published or accepted for publication elsewhere. If a material in an article has an ISBN or ISSN number it is considered to have been published, regardless of where it has been published.

Manuscripts previously rejected by the journal should not be resubmitted.

Exceptionally, the publication of translations of articles may be considered. Authors should write to the Editors setting out a case.

In the case of Empirical articles, authors should include sufficient details of their method to permit readers of the article to make informed judgements of the quality and generalisability of the findings. Therefore articles should usually, as a minimum, give adequate description of sampling, method of data collection and method of data analysis. In order to protect the identity of participants in research, authors should use pseudonyms and remove any information leading to identification of any of the individuals described in the study.

Hrr uses double blind peer review. Anonymisation is used to protect authors and referees, and to ensure that submissions are judged on their merits.

### ***Additional appendices***

In the case of quantitative articles, it is usually desirable for the results reported in the main article to be closely focused on advancing the argument of the paper, with additional results reported in a technical appendix published on the journal website. If the following information is not included in the main article it should be included in a technical appendix submitted alongside the article:

- Descriptive statistics for all variables used in the analysis
- Correlation matrixes for all variables used in regression type analyses
- Full results of any data reduction analyses (factor analysis)
- Full results of all regression type analysis (if only the key results are reported in the article)
- Results of additional sensitivity analyses

Please note, quantitative appendices are not included in the word count limit of 7000 words.
